

Public Health Outcomes Framework - Summary of significantly worse indicators in Torbay - February 2017

Introduction

This summary brings together performance 'outliers' for the Public Health Outcomes Framework (PHOF) for Torbay by life course stage. Only indicators that were identified as statistically significantly worse than the England average on either an annual basis, or for 3 out of 4 quarters are included in the table below. The contents of the table will be reviewed annually.

The 'thermometers' represent the proportion of PHOF indicators by their significance for local comparator areas.

The 'dials' represent the proportion of indicators that are significantly worse in each life course.

Indicators that have changed significance since the last update will feature in Quarterly updates section below.

Quarterly Updates

- 2.02i - Breastfeeding - Breastfeeding initiation*
- 2.06i - Child excess weight in 4-5 and 10-11 year olds - 4-5 year olds
- 3.03x - Population vaccination coverage - MMR for two doses (5 years old)
- 2.23i - Self-reported wellbeing - people with a low satisfaction score
- 2.23iv - Self-reported wellbeing - people with a high anxiety score
